Dear Sir,

After complaint also nothing has been done The purpose of Delaying the project by the contractor for the Rain to start also looks achieved. Now the Rains has started the contractor with help of Department will show the work has been complete and they will enjoy their life. But the villagers are going to suffer a lot because the roads are closed for them as they can not take tractor from that road , there is no proper drainage so that water gets equally distributed to other taal as there is only two man hole pipe put in, where there was required at least 5-7 man hole pipes. so lot of water will overflow to farm lands. and depth of taal remains same for which thsi project was made.

On the contrary another minor has been joined to this village that was led from Village Kurra into this taal only. Just because of their personal interest. now our village that already suffers from Flood will get more water now. Means these two gentle men did nothing good bust destroyed every thing.

Nut Sell is that

1. Roads Broken
2. Drainage of tall water is obstructed

and worst part one more minner is attached in this taal and morte flood to village now.

They did not do a single benefit to village but made the life hell of the villagers.

Request you to please look in the matter or we have to come on roads and take charge in our hand because of personal interest of two people contractor and Engineer full village can not suffer.

Regards,

Aditya Singh

To,
DM-Kaimoor,

Dear Sir,

There is one project going on in the village of ahkori that is situated in thana mohania in district kaimoor Bihar. This projects comes under Jan jivan Hariyali yogna, This is very important project for us because this is for water drainage that comes into village in every rainy season. This problem is not only for one village but for complete vicinity. Its almost relief for village and more then 30000 families.

We thought that project would be beneficial for us but the Fact is Different, Now due to not doing project correctly the whole project is going to be curse for the whole village.

We would like to put our Complaints in Points.

1. Taal ground Level has not being increased, nor widen
2. Banks of taal that was huge and almost two vehicles passed at a time but now the condition is that not even a single vehicle will pass safely.
- 3 The banks are thin because they have pulled the mud from banks and again put them on the banks so that it looks that work has been done, But the actual work was that mud was to be taken from the taal and thrown to banks so that taal gets it depth and banks gets widen but now the banks has been thin taal remains the same.
4. There has been no measurement done and work has been started like that only so the size remain the same.
5. To resume the work and get it closed before Rain Start as work is closed by contractor for more then a month now.

Overall i would like to say that there has been no benefit from the project as but loss is huge only due to mismanagement of project.

1. Our taal banks has been so thin now that it will life risk going there as Rainy season is coming soon and going on that Road will be Risking our life. **So we would like to**

Request

1. Please see project is done in proper way and banks are widen or please leave the project and make our banks in the same way that it was.
 2. To take proper measurement and then do work seriously then only it could be succeed or wise it will just a paper work that will benefit not the villagers,
 2. Please get it closed or As Soon As Possible, as rains would start any time and our roads would be closed for going to our Farm.
 3. To resume the work which is stopped from almost a month,
- Sir we would like to request you to please resolve it soon or we will march too bhabua colertriate on 1 June 2020.
We will sit over there till that time till our problem is not resolved.

I am attaching some photo that is taken by me today that is 21/05/2020
